

Azure Scheduledactions Integration Guide

Installing SDK

To install the local SDK package

- Install nuget.exe on machine
- Open Command line as Administrator in the location of the downloaded .nupkg file
- Type:
 - o `nuget add Azure.ResourceManager.ComputeSchedule.1.0.0-alpha.20240910.1.nupkg -Source "C:\\Program Files (x86)\\Microsoft SDKs\\NuGetPackages\\"` to publish the SDK locally to the offline NuGet packages for Visual Studio
- Open the project you want to install the SDK in and right click on it to open *Manage Nuget Packages*
- Make sure to tick **Include prereleases** and select **Microsoft Visual Studio Offline Packages** as Package source, then search for Computeschedule
- Select the package and install

Using Sample Project

To use the sample project

- Use the step above to install the SDK in the sample project to have access to the SDK functions
- Remember to enter valid values for the following
 - o SubscriptionId
 - o Location
 - o ARM ID of resources for the operation
- Run the project
